Talking Spaces 7 will interrogate the critical issues intersecting the design and use of learning environments. How can we create inclusive environments for learning and community? What can schools do to maximise the use of innovative spaces? How can new schools be delivered to cater to growing populations? What formal and informal 'evaluative knowledge' can be brought to bear on these issues? Through a mix of shared and concurrent sessions, Talking Spaces 7 invites participants to engage in cross-disciplinary conversations about the changing face of learning, learning environments, and the urban fabric of our cities.
